NOTES, DEFINITIONS, AND CONCEPTS

Definitions

A housing “start” is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure. Construction must be on a new foundation to be counted as a housing start. If a dwelling is built on an existing foundation, it is considered a renovation regardless of the extent of new construction.

A “single detached” dwelling is a building containing only one dwelling unit which is completely separated on all side from any other dwelling or structure.

A “semi-detached” dwelling is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “row” dwelling is a ground-oriented dwelling attached to two or more similar units so that the resulting row structure contains three or more units.

An “apartment or other” dwelling includes all dwellings other than those described above, including structures commonly referred to as duplexes, triplexes, double duplexes and row duplexes.

The survey of unsold new home inventory from CMHC defines an unabsorbed unit as a new home that has finished construction and is available for sale. Showhomes are typically counted as part of the unabsorbed inventory.

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a population centre (known as the core). A CMA must have a total population of at least 100,000 of which 50,000 or more must live in the core. A CA must have a core population of at least 10,000.
